

dual action bucket

simple, versatile hygienic mopping system

One of the most common problems with traditional buckets is trying to keep your water clean while mopping. The dual action bucket is a simple, hygienic mopping system that utilizes two separate buckets to keep the water cleaner while using less solution. Emptying the water from the bucket is easy and ergonomic. Simply release the locking plugs to drain the water, there is no need to lift the bucket when it is full. Less frequent trips to change the water, mean increased productivity for you and your staff.

features and benefits

1. Two separate buckets – Less cleaning solution required as dual buckets keep waste water separate from clean water so no need throw out the cleaning solution every time you empty the bucket.
2. Lightweight and durable polypropylene for improved ergonomics
3. Designed for collapsible microfibre flat mop systems but can also be used with traditional wet mops
4. Locking drain plugs allow for fast and easy emptying of buckets, no more heavy lifting
5. Large 30L capacity ensures enough solution to clean large areas
6. Graduated scale for easy measuring
7. Two handles provide increased stability when transporting the bucket

sidepress – bottomless

your bucket, your way

The sidepress wringer allows you to use traditional wet mops or microfibre pads with a collapsible frame. The bucket can also be ordered without the wringer.

product	description	pack
