

Scrubbing headband releases
stubborn stuck-on dirt.

microfibre tube mop

with scrubbing headband

The microfibre tube mop is made from 100% microfibre. Its microscopic split fibres dig deep into surfaces providing more scrubbing action than traditional wet mops. Microfibre is highly absorbent and perfect for general purpose cleaning and spill pickup in hospitals, schools and long-term care facilities. The tailband tape provides wider and more even floor coverage and eliminates tangles while in use and when laundering. The rough headband is perfect for scrubbing away stubborn dirt. This mop should be used damp on any floor surface, smooth or textured.

features and benefits

- Rough headband material easily scrubs away stubborn dirt.
- Microfibre digs deeper, resulting in better cleaning power than traditional wet mops.
- Tailband tape allows for even floor coverage and eliminates tangles.
